Hello everyone!

Those of you who have any kind of combustion engine, you have to start there because if you only knew what product this is, you would use it for everything: the brush cutter-lawnmower-chainsaw-car-motorhome-truck or boat there is no limitation as I see it. I have now tested the product since January 2023 on everything that I own and have, and what strikes me is the savings and the strength you get in your engine is absolutely wonderful.

My Passat All track 2015 was bought new and has now done 47000 miles and has always been at 0.76l/mile and after using Ferox 0.52l/mile a saving of 30%.

My Motorhome Dethleffs Xli Globetrot 2018 which I have driven 1000 miles with and was at 1.4l/mile and after using Ferox 1.2l/mile a saving of 15% however, it is that I can influence it even more. I always drive with a full load of 5400kg and know that if I drive frugally behind trucks the consumption is about 0.85/mile without a problem, but I don't drive that way.

The brush cutter cuts off the branches that normally stopped the machine before using Ferox.

The riding lawn mowers/Chainsaw have become like new, they are 11 years old but what a difference in power they have made.

As you can see, the list is long and it just goes on as I love testing the limits of things, with the results I have got I can only recommend that you also test and hopefully experience the same results.

Yours sincerely, CEO Oddmi AB to Tommy Sverkersson

OddMi

Have now used Ferox for 900 mil (5600 miles) and can only say that it is like balm for the motorhome, about 20% savings and much more energy on the slopes in Norway. Can only recommend this product to everyone with a motorhome. Always fully loaded and still 0.19 liters/mile. (5400 kg), Super product
